PROJECT 409

BUNCH FAMILY SELECTION

Efficiency of bunch-planted and single-planted seedlings for selecting superior crosses in sugar cane

by

J.C. Skinner, N. Berding and D.M. Hogarth

1989

Table 112. Realized gains from selection of families in the Ts trial with evaluation based on the Re type in trial Te. Selection in Ss and Bs seedlings was based on only two replicates (KL).

| Character | Number of families selected | Realized gain as per cent of General Mean | | | | | |

Table 114 continued 5/5

DF = 22

Correlation is significantly different from zero if > 0.404 (5%), 0.515 (1%)

The prefixes B2, S2, B3, S3, and Re are defined as follows:

| | D1X rep KLM | D1X rep KL | A5 RANDOM |
|--------|-------------|------------|-----------|
| Single | S3 | S2 | Re |
| Bunch | B3 | B2 | |

p = plant crop r = ratoon crop

pr = $(p+r)/2$ where p,r are plot values

plr = $(p+r)/2$ where p,r are values for each seedling or clone

SEL7, 8, 10 = Number of clones with visual NMG 7+, 8+, 10+

NMG = Visual net merit grade, GYOT = NMGYOT

Visual net merit grade of whole plot, omitting brix = G_B
including brix = GB

ST = stalks

WS = weight per stalk (kg)

Table 115a. Correlations between family means of Bs and Ss seedlings in the Ts trial vs the Re type in trial Te. Means for families in the Ts trial are based on three (KLM) or two (KL) replicates. DF = 22. The correlation matrix consists of eight parts (a - h).

Table 115a continued 5/5

DF = 22

Correlation is significantly different from zero if > 0.404 (5%), 0.515 (1%)

The prefixes B2, S2, B3, S3, and Re are defined as follows:

| | D1X rep KLM | D1X rep KL | A5 RANDOM |
|--------|-------------|------------|-----------|
| Single | S3 | S2 | Re |
| Bunch | B3 | B2 | |

p = plant crop r = ratoon crop

pr = $(p+r)/2$ where p,r are plot values

plr = $(p+r)/2$ where p,r are values for each seedling or clone

SEL7, 8, 10 = Number of clones with visual NMG 7+, 8+, 10+

NMG = Visual net merit grade, GYOT = NMGYOT

Visual net merit grade of whole plot, omitting brix = G_B
 including brix = GB

ST = stalks

WS = weight per stalk (kg)

Table 115b continued 5/5

DF = 22

Correlation is significantly different from zero if > 0.404 (5%), 0.515 (1%)

The prefixes B2, S2, B3, S3, and Re are defined as follows:

| | | | |
|--------|-------------|------------|-----------|
| | D1X rep KLM | D1X rep KL | A5 RANDOM |
| Single | S3 | S2 | Re |
| Bunch | B3 | B2 | |

p = plant crop r = ratoon crop

pr = $(p+r)/2$ where p,r are plot values

plr = $(p+r)/2$ where p,r are values for each seedling or clone

SEL7, 8, 10 = Number of clones with visual NMG 7+, 8+, 10+

NMG = Visual net merit grade, GYOT = NMGYOT

Visual net merit grade of whole plot, omitting brix = G_B

including brix = GB

ST = stalks

WS = weight per stalk (kg)

Table 115c continued 5/5

DF = 22

Correlation is significantly different from zero if > 0.404 (5%), 0.515 (1%)

The prefixes B2, S2, B3, S3, and Re are defined as follows:

| | D1X rep KLM | D1X rep KL | A5 RANDOM |
|--------|-------------|------------|-----------|
| Single | S3 | S2 | Re |
| Bunch | B3 | B2 | |

p = plant crop r = ratoon crop

pr = $(p+r)/2$ where p,r are plot values

plr = $(p+r)/2$ where p,r are values for each seedling or clone

SEL7, 8, 10 = Number of clones with visual NMG 7+, 8+, 10+

NMG = Visual net merit grade, GYOT = NMGYOT

Visual net merit grade of whole plot, omitting brix = G_B

including brix = GB

ST = stalks

WS = weight per stalk (kg)

Table 115e continued 5/5

DF = 22

Correlation is significantly different from zero if > 0.404 (5%), 0.515 (1%)

The prefixes B2, S2, B3, S3, and Re are defined as follows:

| | | | |
|--------|-------------|------------|-----------|
| | D1X rep KLM | D1X rep KL | A5 RANDOM |
| Single | S3 | S2 | Re |
| Bunch | B3 | B2 | |

p = plant crop r = ratoon crop

pr = $(p+r)/2$ where p,r are plot values

plr = $(p+r)/2$ where p,r are values for each seedling or clone

SEL7, 8, 10 = Number of clones with visual NMG 7+, 8+, 10+

NMG = Visual net merit grade, GYOT = NMGYOT

Visual net merit grade of whole plot, omitting brix = G_B
including brix = GB

ST = stalks

WS = weight per stalk (kg)

DF = 22

Correlation is significantly different from zero if > 0.404 (5%), 0.515 (1%)

The prefixes B2, S2, B3, S3, and Re are defined as follows:

| | | | |
|--------|-------------|------------|-----------|
| | D1X rep KLM | D1X rep KL | A5 RANDOM |
| Single | S3 | S2 | Re |
| Bunch | B3 | B2 | |

p = plant crop r = ratoon crop

pr = $(p+r)/2$ where p,r are plot values

plr = $(p+r)/2$ where p,r are values for each seedling or clone

SEL7, 8, 10 = Number of clones with visual NMG 7+, 8+, 10+

NMG = Visual net merit grade, GYOT = NMGYOT

Visual net merit grade of whole plot, omitting brix = G_B

including brix = G_B

ST = stalks

WS = weight per stalk (kg)

Table 115g continued 5/5

DF = 22

Correlation is significantly different from zero if > 0.404 (5%), 0.515 (1%)

The prefixes B2, S2, B3, S3, and Re are defined as follows:

| | D1X rep KLM | D1X rep KL | A5 RANDOM |
|--------|-------------|------------|-----------|
| Single | S3 | S2 | Re |
| Bunch | B3 | B2 | |

p = plant crop r = ratoon crop

pr = $(p+r)/2$ where p,r are plot values

plr = $(p+r)/2$ where p,r are values for each seedling or clone

SEL7, 8, 10 = Number of clones with visual NMG 7+, 8+, 10+

NMG = Visual net merit grade, GYOT = NMGYOT

Visual net merit grade of whole plot, omitting brix = G_B
including brix = GB

ST = stalks

WS = weight per stalk (kg)

Factorial AOV with two or three crop levels (P, R, PR) * two replicate levels (Rep = KL, KLM) in the Ts trial. Only two crop levels (P,R) were included for number of selections. There were 48 replicates, namely 16 characters * 3 crop classes (P, R, PR) in the Re type in the Te trial. Each mean in the Te trial was based on all three replications. A Z transformation was used.

| Crop levels | Degrees of freedom | | | |
|-------------|--------------------|-----|-----------|-------|
| | Crops | Rep | Crops*Rep | Error |
| 3 | 2 | 1 | 2 | 235 |
| 2 | 1 | 1 | 1 | 141 |

The term a >> b = c shows that a >> c. The = is used for a non-significant difference in some cases to give a clearer presentation. >> shows $P \leq 0.01$, > shows $P \leq 0.05$

NMG_VAR = within-family variance for visual net merit grade. ST = number of stalks
SEL8 = number of seedlings with visual NMG 8.0 or higher.

Table 119. Performance of Ss seedlings in the P and R crops of trial Ts and the same clones in 4-sett plots in the Tm trial.

| Character | Trial | A` | B | C | D | E |
|------------|-------|----------------|----------------|----------------|----------------|----------------|
| BRIX | SsP | 22.48 ± 0.87 | 22.31 ± 0.93 | 21.59 ± 1.35 | 21.92 ± 1.71 | 20.96 ± 1.84 |
| BRIX | SsR | 23.23 ± 0.97 | 22.54 ± 1.13 | 22.97 ± 0.95 | 22.41 ± 1.39 | 21.74 ± 1.74 |
| BRIX | TmP | 19.805 ± 1.438 | 19.329 ± 1.367 | 19.168 ± 1.728 | 19.503 ± 1.238 | 18.525 ± 1.810 |
| STALKS | SsP | 8.70 ± 2.04 | 8.07 ± 2.13 | 7.35 ± 2.36 | 8.10 ± 2.99 | 6.82 ± 2.66 |
| STALKS | SsR | 11.45 ± 3.60 | 8.56 ± 3.52 | 11.01 ± 4.00 | 7.62 ± 2.98 | 7.27 ± 4.12 |
| STALKS | TmP | 19.216 ± 6.031 | 18.407 ± 5.763 | 19.182 ± 6.126 | 18.379 ± 5.486 | 18.072 ± 6.620 |
| HARDNESS | SsP | 5.16 ± 0.96 | 5.07 ± 0.88 | 5.25 ± 0.96 | 5.10 ± 0.98 | 4.98 ± 0.97 |
| HARDNESS | SsR | 5.01 ± 1.00 | 4.73 ± 0.88 | 4.98 ± 0.97 | 4.74 ± 1.13 | 4.67 ± 0.97 |
| HARDNESS | TmP | 5.267 ± 1.060 | 5.088 ± 1.111 | 5.030 ± 1.012 | 5.000 ± 0.926 | 4.947 ± 1.110 |

| SEL8 | TmP | 44 (25.0) | 51 (23.6) | 41 (19.2) | 5 (17.2) | 27 (11.4) |
| SEL10 | TmP | 17 (9.7) | 13 (6.0) | 4 (1.9) | 1 (3.4) | 3 (1.3) |

Class

- A Selected in plant crop, also selected independently in ratoon. 176 clones.
- B Selected in plant crop, rejected in ratoon. 216 clones.
- C Rejected in plant crop, selected in ratoon. 216 clones.
- D Surplus for crop (= plant) with higher natural selection rate. 29 clones.
- E Random 239 clones in the seedling trial, 237 clones in the mass selection trial.

The mean ± standard deviation are shown for each character, except for number of selections (SEL8, SEL10) which show the total number of selections in each class, expressed % of the number in the class, in (). Variances for SsP and SsR are not normal, so the standard deviations presented for them are not reliable. Standard deviations for TmP are based on normal variances, and are satisfactory.

Table 120. Performance of Ss seedlings in the P and R crops of trial Ts and the same clones in 4-sett plots in the Tm trial. Results are expressed as difference from the random group (E).

| Character | Trial | A` | B | C | D |
|------------|-------|----------------|----------------|----------------|---------------|
| BRIX | SsP | +1.52 7.3 | +1.35 6.4 | +0.63 3.0 | +0.96 4.6 |

| (A% - E%) | | | | | |

Class

- A Selected in plant crop, also selected independently in ratoon. 176 clones.
- B Selected in plant crop, rejected in ratoon. 216 clones.
- C Rejected in plant crop, selected in ratoon. 216 clones.
- D Surplus for crop (= plant) with higher natural selection rate. 29 clones.
- E Random 239 clones in the seedling trial, 237 clones in the mass selection trial.

Except for number of selections (SEL8 SEL10) the first line = (Class - Random).

Table 121. Realized gains from individual (mass) selection in the Ts trial, based on visual NMG in P, R and PR crops.

| Ts crop selected | Number (n) | Performance in 4-sett plots in trial Tm | | |
|---------------------------|------------|---|--|---|
| | | Visual NMG Mean \pm SE [`] | Number of selections from trial Tm Graded 8+ | Number of selections from trial Tm Graded 10+ |
| P | 390 | 6.196 \pm 0.118 | 95 (24.4%) | 30 (7.7%) |
| R | 390 | 6.054 \pm 0.109 | 85 (21.8%) | 21 (5.4%) |
| PR | 390 | 6.255 | 95 (24.4%) | 28 (7.2%) |
| Random | 237 | 4.831 \pm 0.139 | 27 (11.4%) | 3 (1.3%) |
| Significance [~] | | P,R >> Random | P,R,PR >> Random | P,PR >> Random R > Random |

[`] SE = standard error of the mean = SD/ \sqrt{n}

[~] > significantly greater than ($P \leq 0.05$)

>> significantly greater than ($P \leq 0.01$)

For Means, significant differences were determined by t-tests

For number of selections, Chisquare tests were used, with a contingency correction of 0.25

Table 122. Correlations between performance of individual Ss seedlings in the Ts trial and the same clones in 4-sett plots in the Tm trial.

| Ts Crop selected | DF | Correlation significant at | |
|------------------|-----|----------------------------|----------|
| | | P ≤ 0.05 | P ≤ 0.01 |
| A+B, A+C | 388 | 0.100 | 0.131 |
| random | 235 | 0.130 | 0.169 |

Class

| | | |
|---|---|-------------|
| A | Selected in P crop, also selected independently in R | 176 clones. |
| B | Selected in P crop, rejected in R | 216 clones. |
| C | Rejected in P crop, selected in R | 216 clones. |
| D | Surplus for crop (= P) with higher natural selection rate | 29 clones. |
| E | Random | 239 clones. |

A+B Selected in TsP crop, 390 clones (2 missing).

A+C Selected in TsR crop, 390 clones (2 missing).

E random, 237 clones (2 missing).

Distributions for selected Ss seedlings (A+B, A+C) are not normal for visual NMG in the Ts trial, so correlations involving them are not valid. There are also doubts about characters such as brix and number of stalks in the Ts trial. All correlations in the Tm trial are valid, as are those between the Tm trial vs the random group in the Ts trial.

Table 123. Selection differentials in the trial Ts, realized gains in trial Tm, with broad sense heritabilities.

Table 123a. Selection differential (Dif), with realized gains from selection (Gain), expressed as per cent of the mean for the random group. Means presented in Table 124 are used in these calculations.

| Crop | Class` | Selection differential or realized gain | | | |
|------|------------------|---|--------|----------|------------|
| | | BRIX | STALKS | HARDNESS | Visual NMG |
| TsP | Dif = (A+B) - E | 6.860 | 22.149 | 2.425 | 50.666 |
| TsR | Dif = (A+C) - E | 6.234 | 53.478 | 6.885 | 75.255 |
| TmP | Gain = (A+B) - E | 5.490 | 3.862 | 4.467 | 28.255 |

Table 123b Realized broad sense heritability (realized $h^2 = \text{Gain} / \text{Dif}$), compared with $h^2 = \text{the correlation TmP vs Ts in } ()$

| Ts trial Crop | Class | Broad sense heritability | | | |
|------------------|-------|--------------------------|---------------|---------------|----------------|
| | | BRIX | STALKS | HARDNESS | Visual NMG |
| TsP | A+B | 0.800 (0.422) | 0.174 (0.315) | 1.842 (0.456) | 0.558 (-0.017) |
| TsR | A+C | 0.881 (0.389) | 0.072 (0.402) | 0.649 (0.328) | 0.375 (0.111) |
| TsP | E | (0.533) | (0.470) | (0.437) | (0.307) |
| TsR | E | (0.505) | (0.451) | (0.400) | (0.344) |

Class

- A Selected in P crop, also selected independently in R 176 clones.
- B Selected in P crop, rejected in R 216 clones.
- C Rejected in P crop, selected in R 216 clones.
- D Surplus for crop (= P) with higher natural selection rate 29 clones.
- E Random 239 clones.

| | n | DF | Correlation | significant |
|---------------------------|------------------------|-----|---------------|---------------|
| | | | $P \leq 0.05$ | $P \leq 0.01$ |
| A+B Selected in TsP crop, | 390 clones (2 missing) | 388 | 0.100 | 0.131 |
| A+C Selected in TsR crop, | 390 clones (2 missing) | 388 | 0.100 | 0.131 |
| E random, | 237 clones (2 missing) | 235 | 0.130 | 0.169 |

The class is used as the X1 variable for correlations, X2 being the value for the same class in the Tm trial. For example, the correlation of 0.422 is (A+B, TsP vs A+B, TmP). Correlations for (A+B) and (A+C) are not valid for visual NMG, and those for brix and number of stalks are doubtful, because the distributions for (A+B) and (A+C) in the Ts trial are abnormal.

Table 124. Mean \pm standard deviation, with CV in (), for each character in the Ts and Tm trials

| Crop | Class` | Character [mean \pm standard deviation, with CV in ()] | | | |
|------|--------|---|-------------------------|------------------------|------------------------|

Class

- A Selected in P crop, also selected independently in R. 176 clones.
- B Selected in P crop, rejected in R. 216 clones.
- C Rejected in P crop, selected in R. 216 clones.
- D Surplus for crop (= P) with higher natural selection rate. 29 clones.
- E Random 239 clones in the Ts trial, 237 clones in the Tm trial.

A+B Selected in TsP crop, 392 clones

A+C Selected in TsR crop, 390 clones (2 missing).

Standard deviations for A+B and A+C in the Ts trial are not valid for visual NMG, and those for brix and number of stalks are doubtful, because the variances are not normal.

All standard deviations for random, and all standard deviations in the TmP crop, are valid.

Table 135. Number of selections from trial Tm which reached advanced stages.

(a) A comparison of normal mass selection in SsP and SsR seedlings.

| Ss crop selected | Class | 4-sett No. | 30-sett No. (%) | YOT No. (%) | SYT No. (%) |
|------------------|-------|------------|-----------------|-------------|-------------|
| P | A+B | 392 | 56 (14.3%) | 11 (2.8%) | 5 (1.3%) |
| R | A+C | 390 | 52 (13.3) | 8 (2.1) | 3 (0.8) |
| Random | E | 237 | 5 (2.1) | 2 (0.8) | 0 (0.0) |

P,R >> Random

(b) A comparison of classes A, B and C.

| Ss crop selected | Class | 4-sett No. | 30-sett No. (%) | YOT No. (%) | SYT No. (%) |
|------------------|-------|------------|-----------------|-------------|-------------|
| P & R | A | 176 | 34 (19.3%) | 6 (3.4%) | 2 (1.1%) |
| P only | B | 216 | 22 (10.1) | 5 (2.3) | 3 (1.4) |
| R only | C | 214 | 18 (8.4) | 2 (0.9) | 1 (0.5) |

A > B
A >> C

Table 136. Number of selections from trial Te which reached advanced stages.

(a) Comparison of types produced by modified mass selection

| Type | 30-sett | YOT | SYT |
|------|---------|-----|-----|
| Re | 103 | 17 | 8 |
| Be | 130 | 17 | 7 |
| Se | 124 | 26 | 6 |

(b) Comparison of selection levels (L1 = best 3 per plot, L3 = worst)

| Level | 30-sett | YOT | SYT |
|-------|---------|-----|-----|
| L1 | 127 | 15 | 9 |
| L2 | 116 | 18 | 5 |
| L3 | 114 | 27 | 7 |

Chisquare tests showed that there were no significant differences between types (Re, Be, Se), or between the three selection levels within the Be and Se types.

Table 137. Value in Ts trial of families with highest and lowest cross ratios in 1989. Cross ratios are the mean of 79N to latest series, omitting 80N which were used in the experiment.

KEY

p = plant crop, r = ratoon crop, pr = (p+r)/2 where p,r are plot values
 sBRVpr = (p+r)/2 of each seedling was used to compute within plot brix
 variance
 VAR = within plot variance
 SEL7 (8, 10) = Number of selections (seedlings) graded 7+ (8+, 10+)
 ST = number of stalks, HARD = Hardness
 B = Visual NMG of whole plot, omitting brix
 AB = Visual NMG of whole plot, adjusted for brix
 S = Weight per stalk (kg)
 N = net merit grade, VISG = Visual NMG
 NYOT = NMGYOT vs standard variety Q82
 SQRG, SQG = SQRT(Visual NMG of each seedling + 0.5)
 sSELST = Number of selectable stalks in each bunch-planted family

Table 138. Value in Re families with highest and lowest cross ratios in 1989. Cross ratios are the mean of 79N to latest series, omitting 80N which were used in the experiment.
